

*First of all, I just want to say thank you to the members, team leaders, Supervisor, and Branch Manager of One's Philippines Epoch Corporation (OPEC) for accepting us and accompanied us in almost 3 months of our journey in the company. I giving thanks also to the President of OPEC – Mr. President Kazumi Aotsuka for giving a chance to experience Japanese environment. Special mention to the members of HKSN Department who was my companion in my OJT days. Namely, ma'am Cyril, ma'am Shiela, ma'am Karen, ma'am Denni, ma'am Glorylyn, sir Rolly John, sir Ed Michael, and lastly the team leader ma'am Rica.*

*As an OJT trainee in the company, I was blessed and grateful that I was one of the students of Holy Cross of Davao College, Inc. that was given this opportunity to work under the Japanese Company. I learned a lot of things not just being a professional in work but also how to value everything you have. I believe that "Everything Comes for a Reason", I think God gave me this opportunity because He knew that I need some improvement on myself. When we were kids used to play and doing some fun things but I realized that it is not the same as we were kids. Being an adult is not very easy we think. We may encounter challenges and problems of our lives but it helps us to grow as a person.*

*In my almost 3 months in OPEC, I was assigned at HKSN Department which they make CAD drawings that focuses on the furniture for the Japanese client. After the 3 days of orientation in the company which is discussed by sir Rayson Ballarta, I also had an orientation with ma'am Rica – Team Leader, about the HKSN Department. At first, I did not get the pointers of the discussions was because words used are in Japanese and the software that is used is also Japanese so it was hard at first but the days followed, I familiarize the Kanji – a system of Japanese writing using Chinese Characters. After 1 month of practiced and familiarized, I received my first actual project as an OJT and I felt excited yet nervous because it is an actual project but its worth to try since I have my team members with me who accompanied me for doing my actual projects. All in all, I received 28 Practice Projects and 6 Actual Projects with the total of 81 drawing projects.*

**CONGRATULATIONS** to us all, graduating students!

*Bachelor of Science in Information Technology*
